

The diagram shows a WEMOS1 module (a clone of the ESP8266) connected to a relay and two LEDs. The module's pins are connected as follows:

- RESET**: Connected to a +5V supply.
- A0**: Connected to a +5V supply.
- D0**: Connected to a +5V supply.
- D1**: Connected to a +5V supply.
- D2**: Connected to a +5V supply.
- D3**: Connected to a +5V supply.
- D4**: Connected to a +5V supply.
- D5**: Connected to a +5V supply.
- D6**: Connected to a +5V supply.
- D7**: Connected to a +5V supply.
- D8**: Connected to a +5V supply.
- 3V3**: Connected to a +5V supply.
- TX**: Connected to a +5V supply.
- RX**: Connected to a +5V supply.
- D9**: Connected to a +5V supply.
- D10**: Connected to a +5V supply.
- D11**: Connected to a +5V supply.
- D12**: Connected to a +5V supply.
- D13**: Connected to a +5V supply.
- D14**: Connected to a +5V supply.
- D15**: Connected to a +5V supply.
- D16**: Connected to a +5V supply.
- D17**: Connected to a +5V supply.
- D18**: Connected to a +5V supply.
- D19**: Connected to a +5V supply.
- D20**: Connected to a +5V supply.
- D21**: Connected to a +5V supply.
- D22**: Connected to a +5V supply.
- D23**: Connected to a +5V supply.
- D24**: Connected to a +5V supply.
- D25**: Connected to a +5V supply.
- D26**: Connected to a +5V supply.
- D27**: Connected to a +5V supply.
- D28**: Connected to a +5V supply.
- D29**: Connected to a +5V supply.
- D30**: Connected to a +5V supply.
- D31**: Connected to a +5V supply.

The relay (K1 G5L) is controlled by the module's output pins. The relay's coil is connected to a +12V supply through a 470Ω resistor (R4). The relay's contacts are connected to a +12V supply through a 470Ω resistor (R1) and a 100Ω resistor (R2). The relay's contacts are also connected to a +12V supply through a 470Ω resistor (R1) and a 100Ω resistor (R2). The relay's contacts are also connected to a +12V supply through a 470Ω resistor (R1) and a 100Ω resistor (R2).
